- ◆ Paper inlay
- ◆ Connects to 8000 Series IP Phones
- ◆ Two-way tilt stand
- ◆ Web Based Management
- ◆ Simple Operation

## USER BENEFITS

The innovative DSS / BLF Call Coverage function, available on the IPECS platform from LG-Nortel, makes the 8000 series the ideal choice for small attendant answering or secretarial Call Coverage positions. The Direct Station Selection (DSS) consoles available in the 8000 Range provide additional flexible keys which can be configured to provide quick and easy access to functions most needed by the answering / coverage position. The Busy Lamp Field (BLF) functions indicate the line, feature and user status (busy, idle or hold).
